

AKSHAY SHARMA

Full-Stack Developer | React • Next.js • Node.js • TypeScript

Brampton, ON • 289-889-0549 • akshaysharma5432@gmail.com • Portfolio • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Full-stack developer with 5+ years across **React, Next.js, Node.js, and TypeScript**, shipping production web apps for e-commerce, internal tooling, and enterprise operations. The thread across every role: take a broken or manual process, design the right software for it, and ship it to real users. Founded and operated an EdTech business — coaching students to their target band scores while engineering the platform that scaled the practice. Built a Shopify + Dataverse order management system that pulled a growing food brand off email and spreadsheets. Architected and shipped **CaseLog**, an enterprise solution used daily by **150+ FedEx users** — VP-recognized, conference-selected. In a world where AI can write the code, the differentiator is knowing what to build, why it matters to the business, and how to land it end-to-end.

SELECTED RECOGNITION

- VP-level recognition for enterprise solution impact, FedEx (2026)
- PPQA (Process & Performance Quality Award) Nominee, 2026
- Selected Speaker, GTA Metro District Quality Conference, April 2026

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind, Shopify Liquid

Backend & APIs: Node.js, Express, REST APIs, Custom Connectors, webhooks, JSON, OData, OAuth

Data: MongoDB, SQL Server, T-SQL, stored procedures, query optimization

Cloud & Tools: Azure AD, Git/GitHub, VS Code, Visual Studio, CI/CD

Integrations: Shopify, Mailchimp, Stripe, geolocation APIs, third-party REST integrations

Other: C#/.NET, PHP, WordPress, Microsoft Power Platform, iOS/Swift fundamentals

Practices: Agile delivery, code review, ALM, UAT, stakeholder workshops, pilot rollout

EXPERIENCE

Power Platform Developer (Internal Initiative) / Cash Applications Specialist

FedEx • Mississauga, ON (Remote) | Jan 2026 – Present

Continuing to ship enterprise solutions on the Microsoft stack as an internal initiative alongside concurrent operations duties — close enough to the financial workflows v2.0 is built for that the design decisions write themselves.

- Architecting migration of CaseLog (enterprise case-management system, 150+ daily users) to a Dataverse + Model-Driven backend with full ALM pipeline (Dev/Test/Prod managed solutions) ahead of expanded rollout.
- Shipped Daily Refund Entry — a full-stack solution with custom UI, workflow logic, REST API integrations across Outlook and Teams, and audit-trail data layer.
- Provide production support and controlled enhancements for live CaseLog (7,500+ daily case actions across 3 stations).

Full-Stack & Power Platform Developer (Part-Time Contract)

Emkao Foods • Remote | 2024 – Feb 2026

Brought in to modernize how a growing food brand managed wholesale and online channels — orders leaking between email threads and spreadsheets, no unified view for leadership.

- Built a real-time JavaScript store locator using geolocation APIs on the Shopify storefront, reducing customer support requests about retailer availability and improving the "where to buy" conversion path.
- Developed custom Shopify Liquid sections, a crowdfunding landing page, and Mailchimp-integrated email flows for the production storefront.
- Built a Shopify Custom Connector for two-way order sync between e-commerce and a Dataverse-backed Wholesale Order Management system, eliminating manual re-entry and order leakage.
- Delivered Power BI dashboards across wholesale and online channels — first unified revenue, SKU, and order-flow visibility for leadership.

Power Platform Developer (Internal Initiative) / Customer Rep-Station (Part-Time)

FedEx • Woodbridge, ON | Sep 2024 – Jan 2026

Walked into 3 stations tracking customer cases on paper and Excel — escalations slipping, no audit trail, no cross-station visibility. Proposed, designed, and shipped CaseLog from scratch as an internal initiative alongside the rep-station role.

- Built CaseLog end-to-end — frontend application, workflow orchestration, REST API integrations across SharePoint / Teams / Outlook / Microsoft Graph, data architecture, security model, and Power BI reporting layer.
- Architected the data layer (libraries, content types, metadata, role-based permissions) for scalability and audit-readiness from day one.
- Delivered station-manager-facing dashboards adopted as the daily operational view — replaced paper + Excel tracking with the first audit trail the stations had ever had for case management.
- Owned the full delivery lifecycle: stakeholder workshops, UAT, pilot rollout, training, configuration documentation, and end-user guides.
- **Outcome:** 150+ daily users, 7,500+ daily case actions across 3 stations. VP-level recognition, PPQA nomination, conference speaker selection.

Full-Stack Developer

Ecomtent (now Azoma) • 2022 – 2024

- Shipped React + Next.js features for a B2B e-commerce content platform; built reusable UI components and integrated AI / third-party APIs through Node.js services.
- Worked across frontend, backend, and database layers — REST APIs, server-side rendering, query optimization, deploys, code review, and bug triage in a fast-moving startup environment.

Software Engineer

DXE Technologies • 2021 – 2022

- Built MERN-stack features (React, Node.js, Express, MongoDB) for internal business applications; developed REST APIs, reusable UI components, and database schemas across frontend, backend, and data layers.

Founder, IELTS Coach & Developer

Mastering IELTS • 2019 – 2021

Started as an IELTS trainer working 1-on-1 with students, then engineered the platform that turned it into a real practice — every manual problem teaching exposed became something to solve in code.

- Coached students to their target IELTS band scores through structured curriculum, personalized practice plans, and 1-on-1 instruction — earning strong word-of-mouth and a steady pipeline of paying students.
- Built the platform end-to-end (PHP, WordPress, JavaScript, React) to replace manual scheduling, content delivery, and progress tracking — letting the practice scale without scaling the manual overhead.
- Owned every side of the operation — instruction, technology, payments, user acquisition, customer support — generating recurring revenue from paying students before transitioning back to full-time engineering.

Earlier Web Development

Events365 • Tej Electric • DSG Papers • 2017 – 2020

- HTML, CSS, JavaScript, and WordPress storefront and marketing-site work for small business clients; learned production deployment, client management, and rapid iteration.

EDUCATION & CERTIFICATIONS

Full-Stack .NET Cloud Developer Certificate — Humber College, 2023

iOS Mobile Apps Development Certificate — University of Toronto, 2023

B.Tech, Electrical Engineering — Punjab Technical University, 2017
