

AKSHAY SHARMA

Power Platform Developer | Microsoft 365 Solutions

Brampton, ON • 289-889-0549 • akshaysharma5432@gmail.com • Portfolio • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Power Platform Developer who builds from inside the business, not from a spec doc. Splits the day between hands-on operations (payments, disputes, reconciliation) and shipping the Microsoft 365 solutions that fix what's broken on the floor. Built **CaseLog** from scratch — a Canvas App + Power Automate + SharePoint solution that replaced paper and Excel tracking across 3 FedEx stations and now processes **7,500+ daily case actions for 150+ users**. The work earned VP-level recognition, a PPQA nomination, and selection to present at the GTA Metro District Quality Conference (April 2026) as a candidate solution for broader network rollout. In a world where AI can write the code, the real differentiator is knowing what to build, why it matters, and how to land it with real users. Pursuing PL-400 (May 2026).

SELECTED RECOGNITION

- VP-level recognition for CaseLog impact, FedEx (2026)
- PPQA (Process & Performance Quality Award) Nominee, 2026
- Selected Speaker, GTA Metro District Quality Conference, April 2026
- CaseLog under evaluation as candidate solution for broader network rollout

CORE SKILLS

Power Platform: Power Apps (Canvas + Model-Driven), Power Automate, Power BI, Power Fx, Dataverse, AI Builder, Copilot Studio

Microsoft 365: SharePoint Online (architecture, governance, permissions), Teams, Approvals, Lists, Forms, Outlook

Integration & ALM: Custom Connectors, REST APIs, OData, Azure AD, App Registration, Managed Solutions, Dev/Test/Prod pipelines

Data: Dataverse, T-SQL, Power Query, DAX, delegation-safe filtering

Delivery: Stakeholder workshops, requirements, UAT, pilot rollout, training, support

Foundations: C#/.NET, JavaScript/TypeScript, React, Next.js, Node.js, MongoDB, SQL Server

EXPERIENCE

Power Platform Developer (Internal Initiative) / Cash Applications Specialist

FedEx • Mississauga, ON (Remote) | Jan 2026 – Present

Continuing to ship Power Platform solutions while running concurrent operations duties — close enough to the financial workflows v2.0 is built for that the design decisions write themselves.

- Leading CaseLog v2.0 — migrating to Dataverse with a Model-Driven layer to break past SharePoint's delegation ceiling. Designing schema, business rules, role-based security, and a full ALM pipeline (Dev/Test/Prod managed solutions) ahead of expanded rollout.
- Shipped Daily Refund Entry (Power Apps + Power Automate + Teams), replacing an Excel-based finance handoff with automated approval routing and a complete audit trail.
- Provide production support and controlled enhancements for live CaseLog (150+ daily users, 7,500+ daily case actions across 3 stations).

Power Platform Developer (Internal Initiative) / Customer Rep-Station (Part-Time)

FedEx • Woodbridge, ON | Sep 2024 – Jan 2026

Walked into 3 stations tracking customer cases on paper forms and Excel — escalations slipping, no audit trail, no cross-station visibility. Proposed, designed, and shipped CaseLog from scratch as an internal initiative alongside the rep-station role.

- Built a Canvas App for case intake, ownership, and status — backed by a SharePoint Online architecture (libraries, content types, metadata, role-based permissions) designed for scale and audit from day one.
- Engineered Power Automate flows for conditional routing, Microsoft Approvals, Teams adaptive cards, reminders, and SLA escalations — eliminating the fragile email-chain handoffs that were breaking down at volume.

- Delivered Power BI dashboards for SLA compliance, throughput, and queue health — adopted by station managers as their daily operational view, not just a report.
- Owned the full delivery lifecycle: stakeholder workshops, UAT, defect triage, pilot rollout, training, configuration documentation, and end-user guides.
- **Outcome:** 150+ daily users, 7,500+ daily case actions across 3 stations — and the first audit trail the stations had ever had for case management. VP-level recognition, PPQA nomination, conference speaker selection.

Power Platform & Web Developer (Contract)

Emkao Foods • Remote | 2024 – Feb 2026

Brought in to modernize how a growing food brand managed wholesale and online channels — orders leaking between email threads and spreadsheets, no unified visibility for leadership.

- Built a Dataverse-backed Wholesale Order Management system (Model-Driven App, Business Process Flows, role-based security), replacing the email + spreadsheet workflow that was leaking orders and delaying fulfillment.
- Developed a Shopify Custom Connector for two-way order sync, eliminating manual re-entry between e-commerce and the wholesale backend.
- Built Power Automate flows for quote generation, approvals, and low-stock alerts; delivered Power BI dashboards across wholesale + online channels for unified revenue, SKU, and order-flow visibility.
- Maintained Shopify storefront: JavaScript store locator (geolocation API), Liquid sections, crowdfunding pages, Mailchimp integration.

Full-Stack Developer

Ecomtent (now Azoma) • 2022 – 2024

- Shipped React/Next.js + Node.js features for a B2B e-commerce content platform; built reusable UI, integrated AI and third-party APIs, contributed across frontend, backend, and database layers.

Software Engineer

DXE Technologies • 2021 – 2022

- Built MERN-stack features (React, Node.js, Express, MongoDB) for internal business applications; developed REST APIs and contributed across frontend, backend, and database layers.

EDUCATION & CERTIFICATIONS

Full-Stack .NET Cloud Developer Certificate — Humber College, 2023

iOS Mobile Apps Development Certificate — University of Toronto, 2023

B.Tech, Electrical Engineering — Punjab Technical University, 2017

In progress: Microsoft PL-400 — Power Platform Developer Associate (May 2026)
